

## **Foot Injury**

### **Candidate's information**

A 30 yr old man presents with pain in their right foot after a fall. He tripped over an uneven footpath. He/she had no symptoms preceding the fall. He/she is normally fit and well with no significant past medical history and no medications. There are no other injuries.

Xrays are available for you to view.

You will be assessed on your ability to take a history and examine the patient's foot and interpret the findings (medical expertise). You will also be assessed on your professionalism and communication with the patient.

*You have 7 minutes to complete the task.*

## **Actor information**

You are a 30 yo man who has pain in your right ankle after a fall. You tripped over an uneven footpath. You had no dizziness, headache, chest pain or other symptoms preceding the fall. You are normally fit and well with no significant past medical history and on no medications. You have no other injuries. You are self employed and work as a carpenter.

You feel that you rolled your ankle as you fell and have pain around your lateral foot. You have been able to weight bear since the incident and have no neurological symptoms.

You initially presented to your LMO who arranged xrays and sent you to the ED.

Some questions to ask (if not addresses by the candidate)

“What is causing my pain?”

“Do I need to see a physio?”

“Do I need an operation”

“Can I drive and go back to work?”
